

MEDIA RELEASE

Ganis Systems Ltd and **Lolatech Ltd.** have announced a new GPRS based enforcement system for Ganis' new line of personal parking meters – The Comet.

Nes Ziona, ISRAEL- Jan 31, 2007 - Ganis Systems Ltd., a supplier of personal parking meter hardware and software, and Lolatech Ltd a provider of advanced municipal and parking enforcement solutions have announced the introduction of a new GPRS based enforcement system based on the Pelepark system developed by Lolatech Ltd. The new system will allow an efficient control of the Comet personal parking meter.

THE COMET is the latest in a line of personal parking meters, used across the world for the past decade by hundreds of municipalities and universities. The Comet is a compact device used to efficiently collect on-street parking fees. The whole system is managed over the Internet – from the initial purchase, to adding parking credit and updating the system. A convenient online system that offers the customer a 24 hour a day service and the municipality a hands-off system.

Personal parking meter technology provides specific benefits to different types of parking operations and parking customers. Organizations can use the meters to support transportation demand management programs and meet the needs of numerous special constituents like downtown merchants and handicap parkers.

“**THE COMET** personal parking meter with the new enforcement system combines the benefits of an advanced technology with the simplicity and convenience of use for motorists and the relevant authorities alike,” says **Arnon Efraty, Ganis' Vice President of Marketing.** "The reliability and security level of the product was yet another issue of major importance during the years devoted to its development, and I think we have every reason to be proud of the result."

LOLATECH, through its Pelepark software suite, delivers enforcement management solutions which drive the success of municipalities and parking operators to manage their parking operations. Its unique approach and advanced technology dramatically increases ticket issuance, revenue generation and streamline operations; helping municipalities to improve parking management and customer service

PELEPARK SOFTWARE suite delivers a comprehensive solution for enforcement management. The products were designed to meet the new generation of parking platforms and the increasing complexities of parking operations. Pelepark, is a state of the art online system that addresses the core challenges of enforcement management process: providing field inspectors with the most user friendly and most efficient tool for parking control, ticket issuance, efficiently and securely letting the parking management team to see online tickets from every internet enabled computer and providing lots of online information regarding the state of parking in a city.

“We are very pleased that Ganis, a worldwide leader of personal parking Meters, have chosen the Lolatech technology to complement their products. We believe that together we will be able to supply the best solution for the collection of on-street parking fee along with an advanced enforcement system. A complete solution for the municipality’s parking department.” Say **Nadav Gelman and Itzik Bronrot, Lolatech's co-founders.**
